Makassar, South Sulawesi, Indonesia

Informatics Engineering graduated from Hasanuddin University with GPA of 3.70/4.00 with a strong technical foundation in Mobile Development and Machine Learning. Demonstrated practical expertise through an internship at Telkom Akses and the Bangkit Academy program led by Google. Skilled in Kotlin, Python, and Web Technologies, with a portfolio that includes building an AI-powered skin disease detection app and conducting advanced market behavior analysis. Eager to leverage technical skills and collaborative experience to contribute to impactful software solutions.

Experiences

Telkom Akses Area Sulbagsel - Makassar, Indonesia Sep 2024 - Dec 2024

Web Developer Intern

- Developed a web-based platform to facilitate the uploading of PR-PO (Purchase Requisition) documents, streamlining the administration process.
- Optimized material request submissions and status updates between partners (mitra) and the internal team.
- Tech Stack: React.js, Firebase, Web Development

Hasanuddin University (Thesis Project) - Makassar, Indonesia Jun 2025 - Jan 2026

AI Researcher & Data Analyst

- Architected an end-to-end NLP pipeline to analyze e-commerce behavior, focusing on multi-label drug classification and anomaly detection.
- Fine-tuned the IndoBERT model to process Indonesian text data, achieving optimized accuracy in categorizing complex medical product labels.
- Analyzed temporal data patterns from 2020–2022 using Isolation Forest, validating detected "panic buying" spikes against Google Trends and historical news events.
- Tech Stack: Python, Hugging Face Transformers, Scikit-learn, Matplotlib, Natural Language Processing (NLP).

Bangkit Academy led by Google, GoTo, & Traveloka - Indonesia (Remote) Feb 2024 - Jul 2024

Mobile Development Cohort

- Collaborated in a cross-functional team of 6 (Machine Learning & Cloud Computing) to build an Android app capable of identifying skin diseases from images.
- Engineered the mobile frontend using Kotlin and XML/Jetpack Compose, implementing MVVM architecture for clean code structure.
- Built an intermediate-level "Story App" integrating the Retrofit library
- Kotlin, Android SDK, Retrofit, Git, MVVM Architecture.

Education Level

Universitas Hasanuddin - South Sulawesi, Indonesia Aug 2021 - Jan 2026

Bachelor of informatics engineering, 3.70/4.00

- Developed a digital library website for the Programming Based on Project final course.
- Designed high-fidelity UI/UX mockups for the Human-Computer Interaction course final project.
- Built a responsive landing page for the Web Programming course project.

Organization Experience

Himpunan Mahasiswa Informatika FT-UH (HMIF FT-UH) - South Sulawesi, Indonesia Apr 2022 - May 2023

Treasurer

- Managed the organizational financial flow, overseeing expenses and income for HMIF FT-UH.
- Prepared comprehensive financial accountability reports for institutional evaluation.

Skills Additional Information

- Technical Skills:** Python, Java, Kotlin, HTML/CSS, Android, SQL, JS, React JS, Next .JS, git, Machine Learning, OOP, Microsoft Office
- Soft Skills:** Growth Mindset, Time and Energy Management, Leadership, Public Speaking , Analytical thinking, Communication
- Interest:** Data Analysis, Artificial Intelligence, Mobile Development, Frontend web Development
- Language:** Indonesian (Native or Bilingual), English (Professional Working)
